

# Movibot

## Automatic Movie Download Site Maker

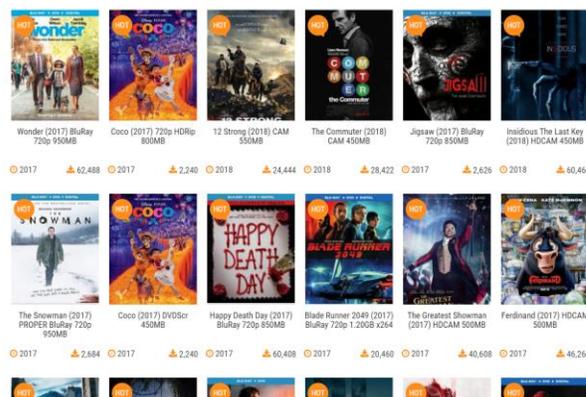

This is the first ever php script that automatically gets movie download links form multiple popular movie sites and compiles them to one place then displays to your visitors.

To properly use the **Movibot** script, we've made this document for you!

**Time saver:** You only need to install and configure it to your server then boom! You now have your own movie downloading site with thousands of movies. An effort less way to earn money from ads.

### ★ BOX OFFICE

## Do less, earn more!

Movibot gets structure api data from the main movie database and allowing your site to run without a database. Yes, without a **database!**

You don't have to manually upload movie files and manually post the movies, everything is **automated**, from search to movie download links!

# Server Requirements

---

Your server needs to meet the requirements below to properly run the script without problems.

- **PHP** >= 5.4
- **cURL** Enabled
- **500MB** Disk Space
- **250MB** RAM
- **Mod Rewrite** Enabled

## Installing

---

1. Download the script from the official download link posted on the forum.
2. Extract and upload the files inside the **Script** folder.
3. Open **system/settings/site\_url.txt** add the script location/url there, example: <http://mymovies.com> or <http://mysite/movies>, Be careful not to add trailing slash at the end.
4. Change permissions of the folder **cache** and **system** to **0755**.
5. Add your Facebook app id in **system/settings/fb\_app.txt** to make the comments to work.
6. You're done! Your movie site should now work properly!

## Configurations

---

To change some site settings like **site name**, **tagline** and **advertisements** the text file containers can be found at **system/settings/**

## Credits

---

Thanks for using our script! Do less, Earn more!
