Requirements

Apache or NGNIX server. For Video Conversion and Auto Video Thumbnail and Duration Required

FMPEG, Supervisor

PHP >= 7.3

BCMath PHP Extension

Ctype PHP Extension

Fileinfo PHP Extension

JSON PHP Extension

Mbstring PHP Extension

OpenSSL PHP Extension

PDO PHP Extension

Tokenizer PHP Extension

XML PHP Extension

GD PHP Extension

FFMPEG && Supervisor (Optional)

Installation

- Upload Script your server and extract Script.zip
- Create MySQL Database and Add user into database
- Type your browser address bar <http://yourwebsite.com>;
- Accept terms of use click continue.
- Check Requirements and continue.
- Fill Installation Details
- Finalize
- Finish

Supervisor Installation

Updating System Packages

```
sudo yum update -y
```

1. Install EPEL Repository

```
sudo yum install epel-release
```

2. Update and Install Supervisor

```
sudo yum update
```

```
sudo yum -y install supervisor
```

3. Then start and enable the supervisord daemon to start on boot using the commands below:

```
sudo systemctl enable supervisord
```

4. Issue the command below to check the status of the service with the command below:

```
sudo systemctl status supervisord
```

Configuring Supervisor

Supervisor configuration files are typically stored in the `/etc/supervisord.d` directory. Within this directory, you may create any number of configuration files that instruct supervisor how your

processes should be monitored. For example, let's create a laravel-worker.conf file that starts and monitors queue:work processes:

Make a directory if not exists

```
sudo mkdir /etc/supervisord.d
```

Created a file

```
sudo nano /etc/supervisord.d/laravel-worker.ini
```

```
[program:laravel-worker]
process_name=%(program_name)s_%(process_num)02d
command=php /home/username/laravel/artisan queue:work --timeout=3600 --sleep=3 --tries=3 --ma
autostart=true
autorestart=true
stopasgroup=true
killasgroup=true
user=username
numprocs=8
redirect_stderr=true
stdout_logfile=/home/username/laravel/worker.log
stopwaitsecs=3600
```

- Replace /home/username/ to your installation directory

Starting Supervisor

Once the configuration file has been created, you may update the Supervisor configuration and start the processes using the following commands:

```
sudo supervisorctl reread
```

```
sudo supervisorctl update
```

```
sudo systemctl status supervisord
```

Customization Video Conversion Resolution

edit file projectpath/app/Utils/MyConstant.php

```
const VIDEO_RESOLUTION = [
    2500 => 720,
```

```
1200 => 480,  
800 => 360,  
300 => 240  
];
```

Setup Task Scheduling for Sitemap & clean tempoary directory

Go to your cron job settings

```
* * * * * cd /home/username/laravel && php artisan schedule:run >> /dev/null 2>&1
```

change home/username to your installation path
